

IAEA/ESNM Webinar Series on Paediatric NM

Cortical (static) renal scintigraphy and radionuclide cystographies

Learning Objectives

1. To describe how to perform good quality renal static and cystographic radionuclide studies in children,
2. To underline diagnostic strength and weakness of those studies, overall in comparison to radiological techniques.
3. To show the actual indications to perform these studies according to the clinical context and the published clinical guidelines, and to illustrate the areas of debate and the likely future evolution of the topic.
